12. Troubleshooting

1 Before You Begin

The Reports module is restricted. You can only open it if your account has one of the following roles:

Role	Access
Administrator	Full access — can view, create and download reports
Superadmin	Full access — can view, create and download reports
All other roles	No access — an Access Denied screen is shown instead

If you see "Access Denied"

Your account does not have the required role. Ask a superadmin to update your role in [User Management](#), then sign out and sign back in.

You will also need at least one **valid email address** to send the report to, and you should know the **date range** of data the report must cover.

2 Opening the Reports Page

- 1 Log in to the ATSS system with an administrator or superadmin account.
- 2 In the **left sidebar**, look for the [Reports](#) item — it uses a document icon.
- 3 Click [Reports](#). The reports list opens and begins loading.
- 4 Wait for the spinner to finish. You will then see either the list of existing reports, or a "**No records found**" message if none have been created yet.

3 Understanding the Reports List

Each row is one **scheduled report definition** — a saved instruction telling the system what to generate, when to generate it, and who to email it to.

Toolbar buttons (top of the page)

Button	What it does
+ Add	Opens the Add Report panel to create a new scheduled report
Search box	Filters the list by report name, report type, or recipient email
Columns	Show or hide table columns; includes All and Reset shortcuts
Refresh	Reloads the list from the server without reloading the page

Columns

Column	Meaning
ID	System reference number for the report
Report Name	The name you gave it
Report Type	What data the report covers
Schedule	The full cadence in plain words, e.g. "Every Year on December 25"
Time	The send time, shown in 12-hour format with GMT+8
Send To	The recipient email addresses
Date Range	The window of data each generated report covers
Last Sent	When the report was most recently dispatched
Created By / Created At	Who created the report and when
Download	Link to the most recently generated PDF

Hidden by default: Weekday and Month

These two columns only apply to some schedules, and the

Schedule

column already spells out the full cadence in words. Turn them on from the [Columns](#) menu if you need them. A dash (—) means no value; [n/a](#) means the field does not apply to that schedule.

4 Creating a New Report

This is the main workflow. Click **+ Add** to open the **Add Report** panel, which slides in from the right, then work down the form.

- 1 Enter a Report Name.** Use at least 3 characters (maximum 255). Choose something you will recognise later, such as *"Monthly Service Order Summary"*.
- 2 Choose a Report Type.** Pick what the report should cover from the dropdown. A short description of the selected type appears underneath. See section 5 for all options.
- 3 Choose a Schedule.** Select how often the report runs. The form then shows only the extra fields that schedule actually needs. See section 6.
- 4 Fill in the schedule details.** Depending on your choice, this may be a weekday, a day of the month, a month, or nothing at all.
- 5 Set the Time (GMT+8).** This is the time of day the report is generated and emailed.
- 6 Set the Reporting Period.** Use a quick-range button or pick the From and To dates. See section 7.
- 7 Enter the recipients** in the **Send To** field, separated by commas. See section 8.
- 8 Check the Preview panel** at the bottom of the form. It summarises the name, type, schedule, period and recipients exactly as they will be saved.
- 9 Click Save.** A progress indicator appears while the report is saved and its first PDF is generated.

The blue summary line is your safety check

As you fill in the schedule, a sentence appears such as *"Every 3 months starting January, on day 1 at 8:00 AM GMT+8."* Read it before saving — it is the clearest confirmation that the timing is what you intended.

Closing the panel

Press **Esc** or click **Cancel** to close without saving. The panel will not close while a save is in progress, so you cannot interrupt a report mid-creation.

5 Report Types Explained

There are eight report types. Most produce a record listing with subtotals and grand totals; two are special.

Report Type	What it contains
Manual Transaction	Payments recorded manually by staff, with received-payment totals
Payment Portal	Payments made by customers through the online payment portal
Combined Transactions	Manual transactions and payment-portal payments in one listing, with a Source column plus separate <i>and</i> combined totals
Inventory	Inventory movement and stock log records
Job Order	Job order records for the period
Service Order	Service order records for the period
Work Order	Work order records for the period
Summary	A consolidated summary across billing, orders, inventory and subscribers — figures rather than a row listing

Which should I pick?

Choose

Combined Transactions

when you need total collections regardless of how the payment arrived. Choose

Summary

for a management overview rather than a detailed record listing.

6 Schedules Explained

The schedule controls **how often** the report is generated and emailed. Each schedule asks only for the fields it needs — you will never be asked for a day of the month on a daily report.

Schedule	You must also provide	When it runs
Every Day	Nothing extra	Once a day at your chosen time
Every Week	Weekday	Once a week on the weekday you choose
Every Month	Day of month	Once a month on the day you choose
Every 3 Months (Quarterly)	Starting month + day	In the starting month you choose, then every third month after it
Every Year	Month + day	Once a year on the month and day you choose

Choosing a day above 28

Not every month has 29, 30 or 31 days. If you pick a day higher than 28 on a monthly schedule, the form warns you that

shorter months will run on their last day instead

. For month-specific schedules the day is capped to that month's length — for example, February will not accept day 30.

Changing the schedule clears unused fields

If you switch from, say, *Every Year* to *Every Week*, the month and day values are cleared automatically. This prevents a leftover value from silently affecting when the report fires.

All times are Philippine time (GMT+8, Asia/Manila). The time you enter is the time the report is generated and sent.

7 Setting the Reporting Period

The reporting period is the **window of data** each generated report covers. It is separate from the schedule: the schedule says *when the report is sent*, the period says *what data goes in it*.

Option A — Quick ranges (fastest)

Click one of the four preset buttons. The From and To dates are filled in for you, ending today:

Button	Period it sets
Today	Today only
Last 7 days	The past week, ending today
Last 30 days	The past month, ending today
Last 90 days	The past quarter, ending today

The button that matches your current selection stays highlighted.

Option B — Custom dates

- 1 Click the **From** field and pick the start date.
- 2 Click the **To** field and pick the end date.

The date pickers limit each other automatically, so you cannot set an end date earlier than the start date. If you do manage to enter an invalid pair, the form will tell you the end date cannot be before the start date.

8 Adding Recipients

- 1 Click the **Send To** field.
- 2 Type one or more email addresses, **separated by commas** — for example `admin@company.com, ops@company.com`.
- 3 Check the coloured chips that appear below the field. Each valid address becomes one chip.

How addresses are handled

- Duplicates are removed automatically, ignoring upper/lower case.
- Any address that is not a valid email is rejected and named in the error message so you can fix it.
- **Each recipient receives their own copy** of the email with the PDF attached.
- At least one valid address is required before the report can be saved.

9 Saving and What Happens Next

- 1 Click **Save**. If anything is missing, a **"Check the form"** message appears and the problem fields are outlined in red with an explanation under each one.
- 2 Fix any highlighted fields. Corrections clear immediately as you type.
- 3 When the form is valid, a full-screen progress indicator appears showing a percentage while the report is saved and its first PDF is generated. **Do not close the browser during this step.**
- 4 Read the confirmation message:
 - **Report Created** — the report was saved. The message repeats the schedule and how many recipients it will be emailed to.
 - **Report Saved With a Warning** — the report was saved and *will still run on schedule*, but the first PDF could not be produced. The reason is shown.
 - **Failed to Create Report** — nothing was saved. Correct the issue and try again.
- 5 Click **OK**. The panel closes and your new report appears in the list.

After saving

The report now runs automatically on its schedule — you do not need to do anything else. Each time it runs, a fresh PDF is generated and emailed to every recipient, and the

Last Sent

column updates.

10 Downloading a Report PDF

- 1 Find the report you want in the list.
- 2 Look at the **Download** column on the far right of the row.
- 3 Click **Download** to open the generated PDF in a new browser tab.
- 4 If the cell shows **"No file"** in grey italics, no PDF has been generated for that report yet.

About the generated PDF

- The document is branded **ATSS FIBER** and is stored in Google Drive.
- Very long listings are capped at roughly **350 printed rows** to keep the file usable.
- **Counts, subtotals and grand totals always cover the complete result set**, never just the printed rows — so the totals are correct even when the listing is truncated.
- When the cap applies, the PDF states how many records matched, how many were printed, and points you to the CSV export for the full row-level listing.

11 Finding and Organising Reports

Searching

Type in the search box to filter instantly. The search matches the **report name**, **report type** and **recipient email**. If nothing matches, use the [Clear search](#) link to reset.

Sorting

- 1 Click any column heading to sort by that column.
- 2 Click the same heading again to reverse the direction.
- 3 The arrow next to the heading shows the current direction — up for ascending, down for descending.

The list is sorted by **Created At**, newest first, by default.

Showing and hiding columns

- 1 Click [Columns](#).
- 2 Tick or untick any column. **All** shows every column; **Reset** returns to the default set.
- 3 Click anywhere outside the menu to close it.

At least one column always stays visible.

Paging through the list

Use the [Show](#) dropdown to display **10, 25, 50 or 100** entries per page (25 by default). Navigate with the first, previous, numbered, next and last buttons. The footer always shows which records you are viewing and the total count.

12 Troubleshooting

Problem	What to do
"Access Denied" screen	Your role is not administrator or superadmin. Ask a superadmin to update it, then sign out and back in.
"Check the form" when saving	One or more fields are invalid. Scroll through the panel and fix every field outlined in red — the reason is written under each one.
"Not a valid email address"	The message names the exact address that failed. Correct the typo and make sure addresses are separated by commas.
"Report Saved With a Warning"	The report is saved and will run on schedule; only the first PDF failed. Wait for the next scheduled run, or report the message shown to your system administrator.
Download shows "No file"	No PDF has been generated for that report yet. It will appear after the report's first successful run.
Report did not arrive by email	Check the Last Sent column to confirm it ran, verify the addresses in Send To , and check the recipient's spam folder. Report emails are sent from <code>billing@atssfiber.ph</code> .
PDF is missing rows	Expected on large reports — the listing is capped at about 350 rows. The totals are still calculated over every matching record. Use the CSV export for the complete listing.
Report ran later than expected	A missed run is allowed to fire up to 30 minutes late so that a brief server interruption never skips a report entirely. This is normal and the report is only ever sent once.
List looks out of date	Click the Refresh button in the toolbar.

Quick reference

- **Access:**
Administrator or Superadmin only
- **All times:**
GMT+8 (Asia/Manila)
- **Report types:**
8
- **Schedules:**
5
- **Report name:**
3–255 characters
- **Recipients:**
comma-separated, at least one valid address
- **PDF row cap:**
~350 rows (totals unaffected)
