Agent Module — Clarifications

Answers on Quota, Commission, Incentives and Teams

This document answers the eleven questions raised about the Agent Module: how Quota and Commission are calculated, what the Incentives figure represents, what a Team is for, and which values are required when an Agent account is created. Each answer states the confirmed behaviour of the system, and flags the few points that need a decision or a small change.

Document Title	SYNC Agent Module — Clarifications
Subject	Quota, Commission, Incentives, Teams, Account Creation
Version	1.0
Document Date	8 August 2026
Prepared By	SYNC Documentation Team
Organization	SYNC
Questions Answered	11
Status	Confirmed against current system behaviour

Answers marked "Needs a decision" or "Needs a small change" are the only items that are not already settled. Everything else describes how the system behaves today.

Action Items	14
Points worth noting, no action required	14

Summary of Answers

The short version of all eleven answers. Each is explained in full in the sections that follow.

#	Question	Answer
1	Is Quota a count or a peso amount?	A COUNT of completed referrals. Not pesos. The 0.00 on screen is a display format only.
2	Can Quota accept whole numbers only?	Yes. It is already treated as a whole number internally; the input should be changed to match.
3	What happens if Quota is left at 0?	No error. Incentives are simply switched off for that Agent — they still earn commission.
4	Is Commission a flat amount per client?	Yes. A flat peso amount for each completed referral. It is not a percentage of the plan.
5	Does changing a rate affect past referrals?	Already-paid referrals are never recalculated. Completed referrals NOT YET paid will be paid at the new rate — see section 5.
6	Is Incentives an amount per batch, or a balance?	Both names are in use. The value you configure is the amount per completed quota batch; the Incentives shown on the payout screens is the accumulated balance.
7	Can the balance be edited directly, and is it logged?	It cannot be edited directly. It only moves through a recorded transaction, and every one records who made it and when.
8	What is a Team used for?	Grouping Agents for statistics and reporting. It does not affect access or how anyone is paid.
9	What happens to an Agent if their Team is renamed or deleted?	Renaming is safe — the Agent follows it. Deleting leaves the Agent with no working team, and nothing else about them changes.
10	Why are Quota and Incentives required at account creation?	They are deliberately required so an Agent is never created half-configured. Defaults can be added — see section 10.
11	What starting values should a new Agent get?	To be agreed with the administrators. A suggested starting point is in section 11.

Quota

1. Is Quota a count of completed referrals, or a peso amount?

Asked: "Count ba ng completed referrals 'to, or peso amount? Ang display kasi 0.00 pero sa glossary, quota = number of completed referrals."

ANSWER

Quota is a COUNT of completed referrals. It is not a peso amount. The glossary is correct — the 0.00 you are seeing on screen is a display format, not the meaning of the value.

WHY IT SHOWS 0.00

The Quota field is presented as a money-style input with two decimal places, which is why an empty or zero value renders as 0.00. The value behind it is used strictly as a whole number: the system counts how many of the Agent's referrals have been completed and compares that count against the Quota. No peso amount is involved at any point in that comparison.

HOW THE THREE FIELDS WORK TOGETHER

Field	What it is	Example
Quota	How many completed referrals make one batch. A count.	5 referrals
Incentives Value	The peso amount awarded for completing one batch.	± 5 0 0 . 0 0
Commission	The peso amount earned for each completed referral.	± 4 0 0 . 0 0

So an Agent with a Quota of 5 and an Incentives Value of ±500.00 earns ±500.00 when 5 referrals are completed — regardless of what those referrals were worth.

IN SHORT

Quota answers "how many?". Incentives Value answers "how much?". Only the second one is money.

2. If it is a count, can the input accept whole numbers only?

Asked: "Kung count, pwede bang whole numbers na lang ang input?"

ANSWER

Yes. The value is already handled as a whole number everywhere it is used — anything after the decimal point is discarded before the comparison is made. Restricting the input to whole numbers changes nothing about how the system calculates; it only stops a confusing value being typed in the first place.

WHAT THE CHANGE INVOLVES

- The Quota input steps in whole numbers instead of hundredths, so 5 cannot become 5.50.
- The placeholder reads 0 rather than 0.00, which removes the impression that it is money.
- A minimum of 0 is enforced, since a negative quota has no meaning.

This is a small front-end change on the Agent account form. It is safe to apply on its own: existing values are unaffected, because a stored 5.00 is already read as 5.

STATUS — NEEDS A SMALL CHANGE

Confirmed as safe and worth doing. It has not been applied yet; it is listed in the Action Items at the end of this document.

3. What happens if Quota is left at 0?

Asked: "Anong mangyayari kung 0 ang naiwan — naka-disable lang ang incentives, or magkaka-error?"

ANSWER

Nothing breaks. There is no error, and nothing is skipped for that Agent other than incentives themselves. A Quota of 0 simply means the Agent is not on an incentive scheme: they continue to earn commission on every completed referral exactly as normal.

WHAT THE SYSTEM DOES

1. The incentive run reads the Agent's Quota and Incentives Value.
2. If either is 0 or blank, the Agent is passed over and recorded as skipped — a normal outcome, not a failure.
3. No incentive is awarded and the Agent's Incentives figure stays where it is.
4. Commission, bonuses and achievement rewards are all unaffected.

Quota	Incentives Value	Result
0 or blank	Any	No incentives. Commission still earned normally.
Any	0 or blank	No incentives. Commission still earned normally.
5	± 5 0 0 . 0 0	I n c e n t i v e s a w a r d e d , ± 5 0 0 . 0 0 f o r e v e r y 5 c o m p l e t e d r e f e r r

SAFE BY DESIGN

Leaving Quota at 0 is a valid way to put an Agent on commission only. It is not an error state and it needs no correction.

Commission

4. Is Commission a flat amount per client?

Asked: "Confirm lang — flat 100.00 per client 'yan, tama? So per completed referral, hindi percentage ng plan."

ANSWER

Correct. Commission is a flat peso amount for each completed referral. It is not a percentage, and it does not vary with the plan the customer signed up for.

HOW A COMMISSION PAYOUT IS CALCULATED

1. The system finds the Agent's referrals that have been completed and not yet paid.
2. It counts them.
3. It multiplies that count by the Agent's Commission rate.
4. The result is offered as the payout total, which can still be adjusted before saving.

So an Agent on a ± 100.00 rate with 12 completed, unpaid referrals is offered twelve customers took the cheapest plan or the most expensive one.

PLAN VALUE IS NOT PART OF THE CALCULATION

The plan a customer chooses affects what the business bills that customer. It has no bearing on what the Agent earns for referring them.

5. If we change an Agent's rate, does it affect past referrals?

Asked: "Kapag binago natin ang rate ng isang agent, apektado ba ang past referrals niya na hindi pa nababayaran, or forward-looking lang?"

PLEASE READ THIS ONE IN FULL

The short answer given in discussion was "forward-looking only". That is right for referrals that have already been paid, but not for referrals that are completed and still awaiting payment. The distinction matters, so it is set out carefully below.

ANSWER

Referral	Affected by a rate change?	Why
Already paid out	No, never.	A payout is a record of what was actually paid. It is never recalculated, and changing the rate afterwards does not alter it.
Completed but not yet paid	YES — it will be paid at the new rate.	The payout total is worked out at the moment you record the payout, using whatever the rate is at that time. A referral completed last month but still unpaid is included at today's rate.
Not yet completed	Yes, it will use the new rate.	It has not been counted for payment at all yet.

WHAT THIS MEANS IN PRACTICE

The rate is applied when the money is paid, not when the referral was made. So a backlog of unpaid referrals will all be settled at whatever the rate happens to be on the day you pay them.

RECOMMENDED PRACTICE

1. Before changing an Agent's rate, open Agent Payout and check whether they have completed referrals still unpaid.
2. If they do, record the payout FIRST, at the old rate. That settles the backlog correctly.
3. Confirm the payout appears in the history with the expected total.
4. Then change the rate. Everything from that point on uses the new one.

IF THE RATE HAS ALREADY BEEN CHANGED WITH A BACKLOG OUTSTANDING

The referrals in that backlog will be paid at the new rate. If that is not what was intended, adjust the payout amount by hand before saving, and record the reason in the Remarks field so the record explains itself later.

Incentives

6. Is Incentives an amount per completed batch, or the Agent's running balance?

Asked: "Amount per completed quota batch ba 'to, or running balance ng agent? Kasi sa Agent Payout screen, balance ang ibig sabihin ng Incentives."

ANSWER

Both readings are correct, because the word Incentives is used for two different things in two different places. This is the source of the confusion, and it is worth being precise about.

Where you see it	What it means	Type
On the Agent account form, as Incentives Value	The amount awarded for completing ONE quota batch. A setting you choose.	Rate
On the Agent Payout and History screens, as Incentives	The total the Agent has accumulated from incentives and not yet been paid. A running balance.	Balance

HOW ONE BECOMES THE OTHER

1. The Agent's completed referrals reach a full quota batch.
2. The Incentives Value for one batch is added to the Agent's Incentives balance.
3. That happens automatically — no one records it by hand.
4. The balance grows with each further batch, and falls when an incentives payout is recorded.

For example, an Agent with a Quota of 5 and an Incentives Value of ± 500.00 completes three batches. Their Incentives balance reads $\pm 1,500.00$ until it is paid out.

LEFTOVER REFERRALS ARE NOT LOST

If the Agent has 17 completed referrals against a quota of 5, three batches are awarded and the remaining two carry forward toward the next batch. Nothing is discarded.

7. If it is a balance, are we editing the Agent's money directly? Is that logged?

Asked: "Kung balance, ibig sabihin nadi-directly edit natin ang pera ng agent dito na walang payout record. Sinasadya ba, and naka-log ba kung sino nag-edit?"

ANSWER

No — the balance cannot be edited directly, and there is no screen that lets anyone type a new figure into it. Every movement of an Agent's money happens through a recorded transaction, and every one of those records who made it and when.

THE ONLY WAYS A BALANCE CAN MOVE

Movement	How it happens	Recorded as
Incentive earned	Automatically, when a quota batch completes.	An entry in Incentives History, one line per qualifying referral.

Movement	How it happens	Recorded as
Commission paid	An administrator records a commission payout.	An entry in Commission History with a reference number.
Bonus added or paid	An administrator records a bonus transaction.	An entry in Bonus History.
Milestone reward	The Agent claims a completed milestone.	A claim record plus an entry in Commission History.

WHAT EVERY TRANSACTION RECORDS

- A reference number, so the payment can be traced.
- The amount, and which balance it moved.
- Who recorded it — the administrator's own name, not a shared system account.
- When it was recorded.
- Remarks, and a proof-of-payment image, both of which are required on payout transactions.

THE ANSWER TO "IS IT DELIBERATE?"

Yes. Balances are deliberately read-only, so that the figure an Agent sees can always be explained by the list of transactions behind it. Adjusting an Agent's balance is done by recording a bonus, which leaves exactly that kind of explanation.

Team

8. What is a Team actually used for?

Asked: "Saan ba talaga ginagamit ang Team — reporting, payout grouping, or access? 'Named grouping' lang ang sabi ng manual."

ANSWER

A Team is used for grouping Agents together for statistics and reporting. That is its whole purpose. It is a label for analysis, not a control.

Does a Team affect...	Answer
Statistics and reporting	Yes. This is what it is for — seeing how a group of Agents is performing together.
What an Agent can see or open	No. Access is governed entirely by the Agent role, not by team membership.
How commission or incentives are calculated	No. Every rate is held against the individual Agent.
How payouts are made	No. Payouts are recorded per Agent, never per team.
Which referrals are credited to an Agent	No. Referrals are credited by the Agent's own name.

IN SHORT

Changing an Agent's team changes how they are grouped in reporting. It changes nothing about their access, their rates, their referrals or their money.

9. What happens to an Agent if their Team is renamed or deleted?

Asked: "Anong mangyayari sa agent kung ma-delete o ma-rename ang team niya?"

ANSWER — RENAMING

Renaming is completely safe. An Agent is attached to the team itself rather than to its name, so the Agent simply moves with it and shows the new name from then on. Nothing else about the Agent changes, and nothing needs to be reassigned.

ANSWER — DELETING

The Agent is left without a working team, and nothing else about them is affected. They keep their account, their access, their rates, their referrals, their balances and their full history. In reporting they will no longer appear under that team, because it no longer exists.

After the team is deleted	State
The Agent's account	Unchanged and still able to sign in.
Their commission, quota and incentives rates	Unchanged.
Their balances and transaction history	Unchanged.
Their referrals	Unchanged and still credited to them.
Their team	No longer resolves to anything. Effectively team-less.

ONE HOUSEKEEPING POINT

Deleting a team does not automatically clear the team setting on the Agents that belonged to it, so those Agents keep pointing at a team that is no longer there. Nothing malfunctions, but they will not group tidily in reporting until they are reassigned. The tidy sequence is to move the Agents to their new team FIRST, then delete the empty one.

Account Creation

10. Why are Quota and Incentives required at account creation?

Asked: "Bakit required ang Quota at Incentives sa account creation kahit hindi pa alam ang values? Pwede kayang may default?"

ANSWER

They are required deliberately. The intention is that an Agent's terms are settled at the moment the account is created, so no Agent is ever left half-configured — earning referrals against rates nobody has agreed. Requiring the fields forces that conversation to happen up front.

Three fields are required together for an Agent account: Commission, Quota and Incentives Value.

CAN THEY HAVE DEFAULTS?

Yes. Adding sensible defaults is straightforward and does not weaken the intent — the fields stay required, they simply arrive pre-filled with a value that can be accepted or overwritten. That removes the awkward case of having to invent a number just to get past the form.

Option	Effect	Recommendation
Leave as is	Every value must be typed for every new Agent.	Works, but slows down account creation and invites guessed values.
Pre-fill with defaults	The form opens with agreed starting values already in place, still editable.	Recommended. Keeps the fields required while making the common case quick.
Make them optional	An Agent can be created with no terms at all.	Not recommended. This is the situation the current rule exists to prevent.

STATUS — NEEDS A DECISION

Adding defaults is agreed in principle. What the defaults should be is question 11, and that needs sign-off before the change is made.

11. What starting values do you recommend for a new Agent?

Asked: "Anong recommended starting values para sa bagong agent?"

ANSWER

This is a commercial decision rather than a system one, and it needs to be agreed with the administrators before it is set. The system imposes no particular values and will accept whatever is decided.

WHAT TO CONSIDER FOR EACH FIELD

Field	What to decide	Notes
Commission	The flat peso amount per completed referral.	This is the figure Agents will care about most. It is applied when a payout is recorded, so see section 5 before changing it later.
Quota	How many completed referrals earn one incentive.	A whole number. Set it to 0 if new Agents should start on commission only.
Incentives Value	The peso amount for completing one quota batch.	Set it to 0 alongside a Quota of 0 if incentives are not offered at the start.

A SAFE STARTING POINT, IF ONE IS NEEDED

If the terms for a particular Agent have not been agreed yet, creating them on commission only is the safest default: a Commission rate at the standard figure, with Quota and Incentives Value both at 0. As section 3 explains, that is a valid configuration — the Agent earns commission normally and simply has no incentive scheme until one is set.

STATUS — NEEDS A DECISION

The actual figures are for the administrators to confirm. Once agreed, they can be applied as the pre-filled defaults described in section 10.

Action Items

Nine of the eleven questions describe behaviour that already works as intended and need no action. These are the three that do.

#	Item	Type	Owner
1	Change the Quota input to accept whole numbers only, with a placeholder of 0 instead of 0.00 and a minimum of 0. Removes the impression that Quota is a peso amount.	Small change	Development
2	Agree the starting Commission, Quota and Incentives Value for a new Agent, then apply them as pre-filled defaults on the account form.	Decision, then small change	Administrators, then Development
3	Adopt the practice of recording any outstanding commission payout BEFORE changing an Agent's rate, so a backlog is settled at the rate it was earned under.	Process	Administrators

Points worth noting, no action required

- **Quota showing 0.00.** Cosmetic only. The value is used as a whole number regardless of how it is displayed.
- **Quota of 0.** A valid configuration meaning commission only, not an error to be corrected.
- **Two meanings of "Incentives".** The configured rate and the accumulated balance are different figures with the same label. Both are correct in their own screen.
- **Deleting a team.** Harmless to the Agent, but reassign Agents first so reporting stays tidy.
