How to read this guide

Screens are shown as they appear in the system's default **dark theme**. Elements you click are named in **violet**. Figures are labelled **Figure 1**, **Figure 2** and so on, and are referenced from the steps beside them.

1 Before You Begin

The Reports module is restricted. You can only open it if your account has one of the following roles:

Role	Access
Administrator	Full access — can view, create and download reports
Superadmin	Full access — can view, create and download reports
All other roles	No access — the screen in Figure 1 is shown instead

Figure 1. The Access Denied screen shown to users without the required role.

If you see this screen

Your account does not have the required role. Ask a superadmin to update your role in [User Management](#), then sign out and sign back in for the change to take effect.

What to prepare

- At least one **valid email address** to send the report to.
- The **date range** of data the report must cover.
- A decision on **how often** the report should be sent.

2 Opening the Reports Page

- 1 Log in with an **administrator** or **superadmin** account.
- 2 In the **left sidebar**, find the **Reports** item — it uses a document icon (see Figure 2).
- 3 Click **Reports**. The list opens and begins loading.
- 4 Wait for the spinner to finish.

You will then see either the list of existing reports, or a **"No records found"** message if none have been created yet.

Figure 2. Sidebar with Reports selected.

While the page is loading

A violet spinner appears with the text **"Loading reports..."**. This is normal and usually takes a moment while the list is fetched from the server.

Don't see Reports in the sidebar?

The item is hidden entirely for roles that cannot access it. If it is missing, your account does not have the administrator or superadmin role — see section 1.

3 Understanding the Reports List

Each row is one **scheduled report definition** — a saved instruction telling the system what to generate, when to generate it, and who to email it to. Figure 3 shows the complete page.

The screenshot shows the 'Reports' page with a toolbar at the top containing a '+ Add' button, a search bar, and a 'Columns' button. Below the toolbar is a table with 9 columns: #, ID, Report Name, Report Type, Schedule, Time, Send To, Last Sent, and Download. The table contains 5 rows of report data. At the bottom is a pagination bar showing 'Showing 1-5 of 24 records' and page navigation controls.

#	ID	Report Name	Report Type	Schedule ▲	Time	Send To	Last Sent	Download
1	14	Daily Collections	Combined Transactions	Every day	08:00 AM GMT+8	ops@sync.ph	08/01/26 08:00 AM	Download
2	13	Weekly Job Orders	Job Order	Every Monday	07:30 AM GMT+8	tech@sync.ph	07/27/26 07:30 AM	Download
3	12	Monthly Summary	Summary	Every Month on day 1	06:00 AM GMT+8	admin@sync.ph	07/01/26 06:00 AM	Download
4	11	Q1 Inventory Audit	Inventory	Every 3 Months, day 5	09:00 AM GMT+8	stock@sync.ph	—	No file
5	10	Annual Statement	Manual Transaction	Every Year on December 25	10:00 PM GMT+8	finance@sync.ph	12/25/25 10:00 PM	Download

Showing 25 entries Showing 1-5 of 24 records Page 1 of 2

Figure 3. The Reports page — toolbar (top), report list (middle), pagination (bottom).

Reading the Schedule column

The cadence is spelled out in full words — "Every Year on December 25" — so you never need to cross-reference other columns to understand when a report runs.

3 Understanding the Reports List · continued

Toolbar buttons

These four controls sit at the top of the page and are shown enlarged in Figure 4.

Figure 4. Left to right — Add, Search, Columns, Refresh.

Control	What it does
+ Add	Opens the Add Report panel to create a new scheduled report (section 4)
Search box	Filters the list by report name, report type, or recipient email
Columns	Shows or hides table columns; includes All and Reset shortcuts
Refresh	Reloads the list from the server without reloading the page

Columns in the list

Column	Meaning
ID	System reference number for the report
Report Name	The name you gave it
Report Type	What data the report covers
Schedule	The full cadence in plain words
Time	Send time, in 12-hour format with GMT+8
Day / Weekday / Month	Individual schedule parts — hidden by default
Send To	The recipient email addresses
Date Range	The window of data each generated report covers
Last Sent	When the report was most recently dispatched
Created By / At	Who created the report and when
Download	Link to the most recently generated PDF

3 Understanding the Reports List · continued

The Columns menu

- 1 Click **Columns** in the toolbar. The button turns violet while the menu is open.
- 2 Tick or untick any column to show or hide it.
- 3 Click **All** to show every column, or **Reset** to return to the default set.
- 4 Click anywhere outside the menu to close it.

At least one column always stays visible — the last remaining column cannot be unticked.

Figure 5. The Columns menu.

Why Weekday and Month are off by default

These two columns only apply to some schedules, and the **Schedule** column already spells out the full cadence in words. Turn them on only if you need to sort or scan by that single value.

Reading empty cells

You see	It means
— (dash)	No value has been recorded — for example, a report that has never been sent
n/a	The field does not apply to this schedule — for example, Weekday on a monthly report. This is correct, not missing data.
No file	No PDF has been generated for this report yet

4 Creating a New Report

Click **+ Add** to open the **Add Report** panel, which slides in from the right of the screen. Figure 6 shows the panel with every section filled in.

Figure 6. The Add Report panel. On screen these sections are stacked in one scrolling column; they are shown side by side here to fit the page.

4 Creating a New Report · continued

The nine steps

- 1 **Enter a Report Name.** At least 3 characters, maximum 255. Choose something you will recognise later, such as *"Monthly Service Order Summary"*.
- 2 **Choose a Report Type.** A short description of the selected type appears underneath the dropdown. See section 5.
- 3 **Choose a Schedule.** The form then shows only the extra fields that schedule actually needs. See section 6.
- 4 **Fill in the schedule details.** Depending on your choice this may be a weekday, a day of the month, a month, or nothing at all.
- 5 **Set the Time (GMT+8).** The time of day the report is generated and emailed.
- 6 **Set the Reporting Period.** Use a quick-range button or pick the From and To dates. See section 7.
- 7 **Enter the recipients** in **Send To**, separated by commas. See section 8.
- 8 **Check the Preview panel** at the bottom. It summarises the name, type, schedule, period and recipients exactly as they will be saved.
- 9 **Click Save.** A progress indicator appears while the report is saved and its first PDF is generated.

The violet summary line is your safety check

As you fill in the schedule, a sentence appears such as *"Every 3 months starting January, on day 1 at 8:00 AM GMT+8."* Read it before saving — it is the clearest confirmation that the timing is what you intended.

If a field is wrong

Invalid fields are outlined in red with the reason written directly underneath, as in Figure 7. Once you have tried to save at least once, validation stays live — corrections clear as you type rather than only on the next attempt.

A dark-themed UI element titled "Send To *" contains a text input field with the value "admin@sync.ph, ops@@sync". The input field is outlined with a red border. Below the input field, there is a red error message: "Not a valid email address: ops@@sync".

Figure 7. A field-level error naming the exact address that failed.

Closing the panel

Press **Esc** or click **Cancel** to close without saving. The panel will not close while a save is in progress, so you cannot interrupt a report mid-creation.

5 Report Types Explained

There are eight report types. Most produce a record listing with subtotals and grand totals; two are special.

Report Type	What it contains
Manual Transaction	Payments recorded manually by staff, with received-payment totals
Payment Portal	Payments made by customers through the online payment portal
Combined Transactions	Manual transactions and payment-portal payments in one listing, with a Source column plus separate <i>and</i> combined totals
Inventory	Inventory movement and stock log records
Job Order	Job order records for the period
Service Order	Service order records for the period
Work Order	Work order records for the period
Summary	A consolidated summary across billing, orders, inventory and subscribers — figures rather than a row listing

Report Type *

Combined Transactions ▼

Manual transactions and payment-portal payments in one listing, with a Source column plus separate and combined totals.

Figure 8. The hint text updates to describe whichever type you select.

Which should I pick?

- Choose **Combined Transactions** when you need total collections regardless of how the payment arrived.
- Choose **Summary** for a management overview rather than a detailed record listing.
- Choose a single-source type when you need to reconcile one system in isolation.

Totals are always complete

Every listing type carries subtotals and a grand total. These are calculated across **every matching record**, even when the printed listing is shortened — see section 10.

6 Schedules Explained

The schedule controls **how often** the report is generated and emailed. Each schedule asks only for the fields it needs — you will never be asked for a day of the month on a daily report.

Schedule	You must also provide	When it runs
Every Day	Nothing extra	Once a day at your chosen time
Every Week	Weekday	Once a week on the weekday you choose
Every Month	Day of month	Once a month on the day you choose
Every 3 Months (Quarterly)	Starting month + day	In the starting month you choose, then every third month after it
Every Year	Month + day	Once a year on the month and day you choose

The form adapts to your choice

The figure shows two examples of the report schedule configuration form. The left example is for the 'Every Day' schedule, which only requires a time selection (08:00). The right example is for the 'Every Year' schedule, which requires selecting a month (December) and a day of the month (25), as well as a time (22:00).

Figure 9. **Every Day** asks for nothing but a time (left); **Every Year** adds Month and Day of Month (right).

Choosing a day above 28

Not every month has 29, 30 or 31 days. On a monthly schedule the form warns you that **shorter months will run on their last day instead**. For month-specific schedules the day is capped to that month's length — February will not accept day 30.

Changing the schedule clears unused fields

If you switch from *Every Year* to *Every Week*, the month and day values are cleared automatically. This prevents a leftover value from silently affecting when the report fires.

All times are Philippine time (GMT+8, Asia/Manila).

7 Setting the Reporting Period

The reporting period is the **window of data** each generated report covers. It is separate from the schedule: the schedule says *when the report is sent*, the period says *what data goes in it*.

Figure 10. The Reporting Period section. **Last 30 days** is active, so it stays highlighted in violet.

Option A — Quick ranges (fastest)

Click one of the four preset buttons. The From and To dates are filled in for you, always ending today:

Button	Period it sets
Today	Today only
Last 7 days	The past week, ending today
Last 30 days	The past month, ending today
Last 90 days	The past quarter, ending today

Option B — Custom dates

- 1 Click the **From** field and pick the start date.
- 2 Click the **To** field and pick the end date.

The two date pickers limit each other automatically, so you cannot set an end date earlier than the start date. If an invalid pair is entered anyway, the form reports that the end date cannot be before the start date.

8 Adding Recipients

- 1 Click the **Send To** field.
- 2 Type one or more email addresses, **separated by commas** — for example `admin@sync.ph, ops@sync.ph`.
- 3 Check the violet chips that appear below the field. Each valid address becomes one chip (Figure 11).

Send To *

admin@sync.ph, ops@sync.ph, finance@sync.ph

Separate multiple addresses with commas. Each recipient receives their own copy with the PDF attached.

✉ admin@sync.ph ✉ ops@sync.ph ✉ finance@sync.ph

Figure 11. Three valid recipients, each confirmed by its own chip.

How addresses are handled

- **Duplicates are removed automatically**, ignoring upper and lower case — so `Ops@sync.ph` and `ops@sync.ph` count as one recipient.
- Any address that is not a valid email is **rejected and named** in the error message, so you know exactly which one to fix.
- **Each recipient receives their own copy** of the email with the PDF attached — recipients do not see each other's addresses.
- At least one valid address is required before the report can be saved.

Separators

Commas are the recommended separator, but semicolons and plain spaces are also accepted. The chips below the field are the reliable confirmation that an address was understood — if an address has no chip, it was not accepted.

9 Saving and What Happens Next

- 1 Click **Save**. If anything is missing, a **"Check the form"** message appears and the problem fields are outlined in red.
- 2 Fix any highlighted fields. Corrections clear immediately as you type.
- 3 A full-screen progress indicator appears (Figure 12) while the report is saved and its first PDF is generated. **Do not close the browser during this step.**
- 4 Read the confirmation message (Figure 13) and click **OK**.

Figure 12 (left) the progress overlay · Figure 13 (right) the success confirmation.

The three possible outcomes

Message	What it means
Report Created	Saved successfully. The message repeats the schedule and how many recipients it will be emailed to.
Report Saved With a Warning	The report was saved and will still run on schedule — only the first PDF could not be produced. The reason is shown.
Failed to Create Report	Nothing was saved. Correct the issue shown and try again.

After saving, you are done

The report now runs automatically on its schedule — no further action is needed. Each time it runs, a fresh PDF is generated and emailed to every recipient, and the **Last Sent** column updates.

10 Downloading a Report PDF

- 1 Find the report you want in the list.
- 2 Look at the **Download** column on the far right of the row.
- 3 Click **Download** to open the generated PDF in a new browser tab.
- 4 If the cell shows "**No file**" in grey italics, no PDF has been generated for that report yet.

Report Name	Last Sent	Download
Daily Collections	08/01/2026 08:00 AM	Download
Q1 Inventory Audit	—	<i>No file</i>

Figure 14. A report with a PDF ready (top) and one that has not run yet (bottom).

About the generated PDF

- The document carries the report brand configured for your system and is stored in Google Drive.
- Very long listings are capped at roughly **350 printed rows** to keep the file usable — an uncapped listing can run to hundreds of printed pages.
- **Counts, subtotals and grand totals always cover the complete result set**, never just the printed rows. The totals are correct even when the listing is shortened.
- When the cap applies, the PDF states how many records matched, how many were printed, and points you to the CSV export for the full row-level listing.

The link opens in a new tab

If nothing happens when you click **Download**, your browser is most likely blocking pop-ups for this site. Allow pop-ups and try again.

11 Finding and Organising Reports

Searching

Type in the search box to filter the list instantly. The search matches three fields: the **report name**, the **report type** and the **recipient email**. If nothing matches, a [Clear search](#) link appears to reset the view.

Sorting

- 1 Click any column heading to sort by that column.
- 2 Click the same heading again to reverse the direction.
- 3 The violet arrow next to the heading shows the current direction — up for ascending, down for descending.

The list is sorted by **Created At**, newest first, by default.

Report Name ▲	Report Type ▲	Time ▲
Q1 Inventory Audit	Inventory	09:00 AM GMT+8
Weekly Job Orders	Job Order	07:30 AM GMT+8
Annual Statement	Manual Transaction	10:00 PM GMT+8

Figure 15. Sorted ascending by Report Type — only the active column's arrow is violet.

Paging through the list

Use the [Show](#) dropdown to display **10, 25, 50 or 100** entries per page (25 by default). Navigate with the first, previous, numbered, next and last buttons.

Figure 16. The pagination bar. The footer always shows which records you are viewing.

Search, sort and paging work together

Searching narrows the list first; sorting and paging then apply to the filtered results. The record count next to the page title always reflects what is currently being shown.

12 Troubleshooting

Problem	What to do
"Access Denied" screen	Your role is not administrator or superadmin. Ask a superadmin to update it, then sign out and back in.
Reports missing from sidebar	Same cause as above — the item is hidden for roles that cannot access it.
"Check the form" when saving	One or more fields are invalid. Scroll through the panel and fix every field outlined in red — the reason is written under each one.
"Not a valid email address"	The message names the exact address that failed. Correct the typo and make sure addresses are separated by commas.
"Report Saved With a Warning"	The report is saved and will run on schedule; only the first PDF failed. Wait for the next scheduled run, or pass the message shown to your system administrator.
Download shows "No file"	No PDF has been generated for that report yet. It will appear after the report's first successful run.
Clicking Download does nothing	The PDF opens in a new tab. Allow pop-ups for this site and try again.
Report did not arrive by email	Check the Last Sent column to confirm it ran, verify the addresses in Send To , and check the recipient's spam folder.
PDF is missing rows	Expected on large reports — the listing is capped at about 350 rows. The totals are still calculated over every matching record. Use the CSV export for the complete listing.
Report ran later than expected	A missed run is allowed to fire up to 30 minutes late so a brief server interruption never skips a report entirely. This is normal, and the report is still only sent once.
A day-31 report ran on the 30th	Expected. Months shorter than the day you chose run on their last day instead.
List looks out of date	Click the Refresh button in the toolbar.
Wrong dates in the report	Check the Date Range column. The reporting period is fixed when the report is created and does not move forward on its own.

Quick Reference Card

ACCESS

Roles	Administrator, Superadmin
Location	Sidebar → Reports

LIMITS

Report name	3–255 characters
Recipients	At least 1 valid address
Day of month	1–31 (capped per month)
PDF listing	~350 rows (totals unaffected)
Per page	10 / 25 / 50 / 100

TIMING

Timezone	GMT+8 (Asia/Manila)
Late-run window	Up to 30 minutes

REPORT TYPES (8)
